### *Revision History:*

Revision	Date	Software Version	Description of Change
1.3	1 June 2004	2.35.07 L or higher	Auto Sync on Inputs 5/6/7/8 added.
1.2	19 April 2004	2.28.07 L or higher	Inputs 5 to 8: association between inputs and type of signal. Memories.
1.1	26 September 2003	2.18.10 L or higher	Various minor amendments.
1.0	22 August 2003	2.18.10 L or higher	Initial version.

## 1. Introduction

This document describes the communication and data formats used to control SIM2 HT300 LINK projector via RS-232C port.

## 2. Connection

Switch off your Personal Computer and Projector before connecting RS 232C cable.

Use a standard serial cable with 9 pin female to the Personal Computer and 9 pin male to the Projector: pin 2 connects to pin2, pin 3 to pin 3 and pin 5 to pin 5.

SIM2 HT300 LINK RS-232C Port is described as follows.

### ***SIM 2 HT300 LINK RS-232C Control Port:***

D-SUB 9-pin (female)	Pin No	Signal	Definition
		1	N/A
2		TD	Transmit data
3		RD	Receive data
4		N/A	Not used
5		GND	Ground
6		N/A	Not used
7		N/A	Not used
8		N/A	Not used
9		N/A	Not used

Switch on the Personal Computer and, after start up, switch on the Projector.

Load a suitable communication software onto your Personal Computer, and set the Serial Port Parameters as shown below.

### ***Communication Parameters:***

Parameter	Value
Transfer Rate	19200 bps
Data Bits	8
Parity Bit	None
Stop Bit	1
Flow Control	None

Set Send Mode and Read Mode to HEX.

### 3. Communication Protocol

The communication protocol is packet oriented. Packets consists of Header and Payload.

There are two types of packets: Event and Operation.

The packet header size is fixed (7 bytes), while the packet payload type and content varies based on the type of packet: Event payload size is 6 bytes, while Operation payload size is 25 bytes.

The entire packet size is variable, being the sum of the fixed-size packet header and variable-sized packet payload: Event packet size is 13 bytes and Operation packet size is 32 bytes.

Each packet received by the projector is acknowledged with a return code:

- 06: Acknowledged with no error
- 15: Acknowledged, but an error has occurred.

#### **Header**

All Packets use the same Packet Header format.

The Packet Header size is fixed at seven bytes.

0	1	2	3	4	5	6
BE	EF	Packet Type	Packet Payload Size		Packet Checksum (CRC)	

**0xEFBE** is a fixed value that is used to insure packet alignment if there are partial packets received or byte lost. The ls-byte of the word 0xBE is sent first, then the ms-byte 0xEF.

The **Packet Type** is a number (a byte in length) that defines the type of data in the packet.

The **Packet Payload Size** is a number (two bytes) that defines the size of the payload portion of the packet. For a given Packet Type, Packet Size is fixed.

The **Packet Checksum** (two bytes) is the CRC value for the entire packet (Header and Payload).

#### **Payload**

The packet payload format depends on the packet type.

The Event packet payload size is 6 bytes, while the Operation packet payload size is 25 bytes.

#### **Event Packet Format:**

0	1	2	3	4	5
Event		00	00	00	00

#### **Operation Packet Format:**

0	1	2	3	4	5	6	7	8	9	10	11	12
Op Type	Operation ID		00	00	Target		Operation Value				00	00
13	14	15	16	17	18	19	20	21	22	23	24	
00	00	00	00	00	00	00	00	00	00	00	00	

## 4. Commands

### *Remote Control Keycodes*

The following commands send simulated Remote Control input to SIM2 HT300 LINK projector.

#### ***Remote Control Keycodes:***

- (1) When the unit is in Stand-by state, this command switches on the unit and the last source memorised prior to switch off is automatically selected.
- (2) When the unit is in Stand-by state, this command switches on the unit and selects the corresponding Source.

## Operation Codes

The following codes provide direct access to SIM2 HT300 LINK User Interface operations not accessible via a single Remote Control command.

## 5. Examples

### 1. Send the simulated "SWITCH ON FROM STAND-BY AND SELECT SOURCE" Remote Control keycode.

Remote Control allows Switching on from Stand-by via one of the keys "1", "2" ... "11", "12".

Send, for instance, the code relative to key "1": BEEF02060080E5490100000000.

The projector switches on and selects Input 1.

The projector returns the response code: 06 (Acknowledged with no error).

**NOTE:** Commands that simulate keys "1", "2" ... "11", "12" switch on the unit and select the corresponding Source.

Command that simulate key 0 switches on the unit: the last source memorised prior to switch off is automatically selected.

### 2. Send the simulated "MENU RIGHT" Remote Control keycode.

Send the packet: BEEF02060023E75A0100000000.

The OnScreen Display appears on the screen.

The projector returns the response code: 06 (Acknowledged with no error).

### 3. Send the "SET ASPECT ANAMORPHIC" Operation Code.

Send the packet: BEEF0206009DF5840100000000.
